DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 2. Claims 1-8 are rejected under 35 U.S.C. 102(b) as being anticipated by Kawasaki et al (5,425,716). Kawasaki discloses a syringe pump including a syringe barrel size sensor mechanism including a movable member mounted for contact with the syringe barrel, a plurality of sensors, and a plurality of flags, the moveable member being arranged to effect relative movement between the flags and the sensors, characterized in that each sensor is responsive to a flag to provide a first or second output according to the position of the flag relative to the sensor, and that the flags and sensors are arranged such that the output of at least one sensor changes from the first to the second state and then back to the first state for relative movement between the flags and sensors in one direction; characterized in that all of the sensors change from the first to the second state then back to the first state for relative movement between the flags and sensors; or characterized in that the flags and sensors are arranged such that the movable member is moveable between a position in which a sensor is exposed on one side of a flag through a second position where the flag is aligned with the sensor to a third position where the sensor is exposed on an opposite side of the flag; or characterized in that the moveable member includes an arm pivotally mounted at one end and having its other end arranged to contact the syringe barrel; or characterized in that the moveable member has an overcentre action; or characterized

Application/Control Number: 10/560,965 Page 3

Art Unit: 3763

in that the flags are moveable with the moveable member and that the sensors are fixed with the pump housing; or characterized in that the sensors are optical sensors; or characterized in that the barrel size sensor mechanism includes three sensors and three flags.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Melissa A. McCorkle whose telephone number is (571) 272-2773. The examiner can normally be reached on Monday - Friday, 8:00am - 4:30pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Nick Lucchesi can be reached on (571) 272-4977. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
